

COURSE NOTES ON QUANTIZATION AND COHOMOLOGY, WINTER 2007

JOHN BAEZ*
NOTES BY APOORVA KHARE*

CONTENTS

1. Jan 16, 2007: Schrödinger's equation	2
1.1. Questions	2
1.2. Motivating geometric quantization	4
2. Jan 23, 2007: Categorification	6
2.1. A secret functor	6
2.2. Bringing in arbitrary categories	7
3. Jan 30, 2007: Physics is rigged!	9
3.1. The analogous viewpoints	9
3.2. Switching between the classical and quantum viewpoints	9
3.3. Wick rotation and a spring in imaginary time (revisited)	11
4. Jan 23, 2007: Statistical mechanics and deformation of rigs	12
4.1. Statistical mechanics "quantizes" strings	12
4.2. A family of rigs via the Boltzmann map	13
4.3. The analogous situation for quantization	14
5. Feb 13, 2007: An example of path integral quantization - I	15
5.1. Example: free particle on the real line	15
5.2. Doing the math	16
6. Feb 20, 2007: An example of path integral quantization - II	19
6.1. Time-evolution operators	19
6.2. Bringing in the Hamiltonian	20
6.3. Computing the normalizing factors	21
7. Feb 27, 2007: More examples of path integrals	24
7.1. A potential problem	24
7.2. The Lie-Trotter Theorem and self-adjoint operators	25
7.3. Generalization to complete Riemannian manifolds	26
7.4. Back to the general picture	26
