

COURSE NOTES ON QUANTIZATION AND COHOMOLOGY, WINTER 2007

JOHN BAEZ*
NOTES BY APOORVA KHARE*

CONTENTS

1. Jan 16, 2007: Schrödinger's equation	3
1.1. Questions	3
1.2. Motivating geometric quantization	5
2. Jan 23, 2007: Categorification	7
2.1. A secret functor	7
2.2. Bringing in arbitrary categories	8
3. Jan 30, 2007: Physics is rigged!	10
3.1. The analogous viewpoints	10
3.2. Switching between the classical and quantum viewpoints	10
3.3. Wick rotation and a spring in imaginary time (revisited)	12
4. Jan 23, 2007: Statistical mechanics and deformation of rigs	13
4.1. Statistical mechanics "quantizes" strings	13
4.2. A family of rigs via the Boltzmann map	14
4.3. The analogous situation for quantization	15
5. Feb 13, 2007: An example of path integral quantization - I	16
5.1. Example: free particle on the real line	16
5.2. Doing the math	17
6. Feb 20, 2007: An example of path integral quantization - II	20
6.1. Time-evolution operators	20
6.2. Bringing in the Hamiltonian	21
6.3. Computing the normalizing factors	22
7. Feb 27, 2007: More examples of path integrals	25
7.1. A potential problem	25
7.2. The Lie-Trotter Theorem and self-adjoint operators	26
7.3. Generalization to complete Riemannian manifolds	27
7.4. Back to the general picture	27
