INSTRUCTIONS FOR STUDENTS

- Questions are on both sides of the paper. This is an 11 question exam (One extra credit problem can be attempted for a total of 12 questions).
- Students have 2 hours and 15 minutes to complete the exam.
- **PLEASE SHOW ALL WORK.** Any unjustified claims will receive no credit. Clearly box your final answer.
- You **MUST** complete **11** problems for credit. In the above table in the row with the ✓, please mark with a ✓ which problems you want to be graded. If you wish to do a 12th problem for extra credit, please write *EC* in the ✓ row for the problem you wish to be counted for extra credit.
- No notes, textbooks, phones, calculators, etc. are allowed for the exam.
- Each of the 11 questions you choose to do will be graded out of 3 points. The score will then be totaled and multiplied by 3 to get a raw score out of 99 points. One point will be given for clearly writing your name on the exam sheet. This will get you to 100 points. If you choose to do a 12th problem for extra credit, the most that will be awarded for that question will be 3 points. So, the highest possible score on this examination is 103 points out of 100.
- The back of the test can be used for scratch work.

GOOD LUCK!

FORMULAS:

Name	Formula
Square of Sum	$(A + B)^2 = A^2 + 2AB + B^2$
Square of Difference	$(A - B)^2 = A^2 - 2AB + B^2$
Sum of Square	$(A + B)(A - B) = A^2 - B^2$
Difference of Cubes	$F^3 - L^3 = (F - L)(F^2 + FL + L^2)$
Sum of Cubes	$F^3 + L^3 = (F + L)(F^2 - FL + L^2)$

1) Simplify the following expression completely

$$\frac{x^2 + 5x - 36}{x^2 - 10x + 24}$$

2) Perform the indicated operation and simplify completely:

$$\frac{4x^3 - 36x}{x^2 + 3x - 4} \div \frac{6x - 2x^2}{2x^2 - x - 1}$$

3) Perform the operations and simplify completely:

$$\frac{2x^2 + 5x}{4x - 4} - \frac{x^2 + x + 5}{4x - 4}$$

4) Perform the operations and simplify completely:

$$\frac{3x}{x - 1} - x$$

5) Perform the operations and simplify:

$$\frac{x-1}{x^2-3x-4} - \frac{x-2}{x^2-4x-5}$$

6) Simplify the complex fraction completely:

$$\frac{\frac{1}{n} - \frac{1}{m}}{\frac{n}{m} - \frac{m}{n}}$$

7) Simplify the complex fraction completely:

$$\frac{1}{x + \frac{1}{x-2}}$$

8) Solve the following equation for x :

$$x - \frac{25}{x-1} = 1$$

9) Solve the following equation for x :

$$\frac{1}{x+3} + \frac{1}{x-3} = \frac{6}{x^2-9}$$

10) A boat that travels 7 km/hr in still water can travel 9 km downstream in the same time as it takes to travel 5 km upstream. Find the speed of the current in the river.

11) Jim has scored 9 free throws out of 10 tries, so that he has a 90% average. How many shots in a row would Jim have to miss in order for him to have a 50% average?

12) Carol spends 17 hours in a 2-week period practicing her culinary skills. How many hours does she practice in 5 weeks?
