$\checkmark$										50
Score										
Pts. Possible	10	6	3	5	8	6	8	6	6	58

#### INSTRUCTIONS FOR STUDENTS

- Questions are on both sides of the paper. This is an 9 question exam.
- Students have 2 hours and 15 minutes to complete the exam.
- The test will be out of **50 points**. The highest possible score will be **58 points**. You can attempt as many of the questions as you wish, but keep in mind you are trying to get to the **50 points**.
- In the above table, the row with the  $\checkmark$ , is for you to keep track of the problems you are attempting/completing.
- Higher point problems are harder, thus they are weighted more. In order to do well, you will have to attempt some of the more difficult problems.
- You may complete parts of problems, as partial credit will be given based on correctness, completeness, and ideas that are leading to the correct solutions.
- **PLEASE SHOW ALL WORK**. Any unjustified claims will receive no credit. Clearly box your final answer.
- No notes, textbooks, phones, calculators, etc. are allowed for the exam.
- The back of the test can be used for scratch work.

# GOOD LUCK!

## FORMULAS:

Useful Formulas	Useful Formulas				
$\frac{d(\arcsin(x))}{dx} = \frac{1}{\sqrt{1-x^2}}   x  < 1$	$\int \frac{dx}{\sqrt{a^2 + x^2}} = \arcsin\left(\frac{x}{a}\right) + C$				
$\frac{d(\arccos(x))}{dx} = -\frac{1}{\sqrt{1-x^2}}   x  < 1$	$\int \frac{dx}{a^2 + x^2} = \frac{1}{a} \arctan\left(\frac{x}{a}\right) + C$				
$\frac{d(\arctan(x))}{dx} = \frac{1}{1+x^2}$	$\int \frac{dx}{x\sqrt{a^2 - x^2}} = \frac{1}{a} \operatorname{arcsec} \left  \frac{x}{a} \right  + C$				
$\sin(2\theta) = 2\sin(\theta)\cos(\theta)$	$\cos^2(\theta) = \frac{1}{2}(1 + \cos(2\theta))$				
$\sin^2(x) + \cos^2(x) = 1$	$\sin^2(\theta) = \frac{1}{2}(1 - \cos(2\theta))$				

1) (10 pts.) The following question is designed to walk you through how to find the volume of the torus, the doughnut shaped solid pictured at the bottom of the page.

a) (1pt.) Write the equation of a circle with center at (R, 0) and radius r.

b) (2pt.) Solve the equation of the circle you found in part (a) for x. Now, using the result, write out the functions g(y) and f(y) that are given in the diagram below.

c) (3pts.) Integrating with respect to y, set up the integral for the volume. We are really doing washers from scratch. We are finding the area of the large outside disk and small inner disk. (*Hint: Since we are integrating with respect to y, the formula is no longer top – bottom, but right – left.*)

d) (4pts.) Do the integration and find the volume, using the answer from part (c). (Interpret the integral  $\int_{-1}^{1} \sqrt{r^2 - y^2} \, dy$  as a portion of an area of the circle. Otherwise, the integral is a trig-sub.)

2) (6 pts.) The following question is designed for you to derive the surface area of a sphere.

Find the area of the surface generated by revolving the curve  $y = \sqrt{R^2 - x^2}$ , for  $-R \le x \le R$  about the x-axis.

4

4) (3 pts.) (a) Solve the initial value problem  $\frac{dy}{dx} = \frac{1}{x^2 + 1}$ , y(0) = 1(2 pts.) (b) From part (a), you will have a function, y(x) which satisfies the above equation. Use the answer from part (a) to compute:  $\lim_{x \to \infty} y(x)$ .

5) (8 pts.) Compute the following integral

$$\int_0^t e^s \sin(t-s) \, ds$$

6) (6 pts.) Evaluate the integral

7) (8 pts.) Evaluate the integral

$$\int \frac{\sqrt{x^2 - 9}}{x^3} \, dx$$

8) (6 pts.) Evaluate the following integral. (*Hint: Make a substitution to change the exponential functions to polynomials. Then use partial fractions.*)

$$\int \frac{e^{2x}}{e^{2x} + 3e^x + 2} \, dx$$

9) (3pts.) (a) Evaluate the integral and state whether it is convergent or divergent:  $\int_{1}^{\infty} \frac{\ln x}{x} dx$ (3pts.) (b) Evaluate the integral and state whether it is convergent or divergent:  $\int_{e}^{\infty} \frac{1}{x(\ln x)^3} dx$
