## Figure for Exercise 02.3

In this drawing the radii of the two circles are assumed to be $\mathbf{1}$. Let $\boldsymbol{a}, \boldsymbol{b}, \boldsymbol{c}$ denote the areas of the regions labeled $\mathbf{A}, \mathbf{B}, \mathbf{C}$ respectively. Then we can compute $\boldsymbol{b}$ since it is the area of an equilateral triangle whose sides have length $\mathbf{1}$, we can compute $\boldsymbol{b}+\boldsymbol{c}$ because it is the area of a $\mathbf{6 0}$ degree circular sector with radius 1 , and we can compute $a+2 b+4 c$ because it is the area of a circle of radius 1. Use these equations to find $\boldsymbol{a}$.
