

Mathematics 246A
Algebraic Topology — I
Course Notes
Winter 2007

Department of Mathematics
University of California, Riverside

Detailed Table of Contents

Preface	1
Prerequisites	3
Set theory	3
Topology	3
Algebra	4
I. Foundational and geometric background	5
1. Categories and functors	5
Examples of categories	6
Functors	7
Examples of covariant functors	7
Contravariant functors and examples	8
Properties of functors	10
Natural transformations	11
Equivalences of categories	13
2. Barycentric coordinates and polyhedra	13
Affine independence and barycentric coordinates	13
Sets with simplicial decompositions	14
Decompositions of prisms	15
3. Subdivisions	18
Simple examples	18
Definition of subdivisions	19
Barycentric subdivisions	19
Diameters of barycentric subdivisions	22
II. Homotopy and cell complexes	23
1. Homotopic mappings	23
Special types of homotopy equivalences	25
Counting homotopy classes	26
Important standard notation	27
2. The fundamental group	28
3. Abstract cell complexes	28
Adjoining cells to a space	31
Cell complex structures	34
4. The Homotopy Extension Property	36
III. Simplicial homology	39
1. Exact sequences and chain complexes	40
2. Homology groups	44
3. Homology and simplicial complexes	45
4. Comparison principles	51
5. Chain homotopies	56
IV. Singular homology	59
1. Definitions	59

2.	Eilenberg-Steenrod properties	61
3.	Computations	67
4.	Proofs of homotopy invariance and excision.....	75
5.	Homology and the fundamental group.....	80
