Mathematics 138A

Introduction to Differential Geometry — I

Course Notes

Winter 2004

Department of Mathematics

University of California, Riverside

Table of Contents

I. **Classical differential geometry of curves** 1
1. Cross products 2
2. Parmetrized curves 6
3. Arc length and reparametrization 11
4. Curvature and torsion 14
5. Frenet-Serret Formulas 27

II. **Closed curves as boundaries** 32
1. Regions, limits and continuity 34
2. Smooth mappings ..... –
3. Inverse and implicit function theorems ..... –
4. Global properties of plane curves ..... –

III. **Surfaces in 3-dimensional space** 37
1. Mathematica descriptions of surfaces ..... –
2. Parametrizations of surfaces ..... –
3. Tangent planes ..... –
4. The First Fundamental Form ..... –
5. Surface area ..... –
6. Curves as surface intersections ..... –

IV. **Oriented surfaces** ..... –
1. Normal directions and Gauss maps ..... –
2. The Second Fundamental Form ..... –
3. Quadratic forms and adjoint transformations ..... –
4. Normal, Gaussian and mean curvature ..... –
5. Special classes of surfaces ..... –
6. Compatibility equations, *Theorema Egregium* ..... –
7. Fundamental Theorem of Local surface theory ..... –
