Mathematics 138A

Introduction to Differential Geometry — I

Course Notes

Winter 2004

Department of Mathematics

University of California, Riverside

Table of Contents

I. **Classical differential geometry of curves** 1
1. Cross products 3
2. Parmetrized curves 7
3. Arc length and reparametrization 12
4. Curvature and torsion 15
5. Frenet-Serret Formulas 27

II. **Closed curves as boundaries** 35
1. Regions, limits and continuity 37
2. Smooth mappings 40
3. Inverse and implicit function theorems 45
4. Global properties of plane curves 48

III. **Surfaces in 3-dimensional space** 55
1. Mathematica descriptions of surfaces 55
2. Parametrizations of surfaces 57
3. Tangent planes 66
4. The First Fundamental Form 70
5. Surface area 74
6. Curves as surface intersections 76

IV. **Oriented surfaces** 79
1. Normal directions and Gauss maps 79
2. The Second Fundamental Form 82
3. Quadratic forms and adjoint transformations 86
4. Normal, Gaussian and mean curvature 89
5. Special classes of surfaces 94
6. Compatibility equations, *Theorema Egregium* 100
7. Fundamental Theorem of Local surface theory 107
