

UPDATED GENERAL INFORMATION — MAY 10, 2019

The second quiz

As noted before, this is scheduled for **Thursday, May 16,**. It will cover material from Units 4.X through 6.X, and it will likely be a problem involving (a) continued fractions, (b) the sorts of problems studied by Diophantus, (c) the Pappus Centroid Theorem, or (d) the Chinese Remainder Theorem. Some typical problems of these sorts are in the course directory files `chinese remainder.pdf`, `confrac.pdf`, `confrac0.pdf`, `diophantus-examples.pdf`, `history04c.pdf`, `history05a.pdf`, `history05e.pdf`, `history06c.pdf`, `pappusproblems.pdf`, and the exercise files for Chapters 4 through 6 on the covered material. Some additional problems will be posted over the weekend.
