

Mathematics 205A: Topology – I Part Two

Course Notes, Fall 2014

Detailed Table of Contents

Introduction	iii
Comments on the texts	iv
Prerequisites	v
Algebra	v
Analysis	v
Category theory	vi
VII. Topological deformations and approximations	1
VII.1 : Homotopic mappings	2
Relative homotopies	3
VII.2 : Some examples	4
Homotopy and close approximations	4
Countability criterion for homotopy classes	5
VII.3 : Homotopy classes of mappings	7
Homotopy equivalences	7
Composition functors	8
Pointed spaces and basepoint-preserving mappings	9
VII.4 : Homotopy types	10
Deformation retracts	10
A more complicated example	11

VIII.	The fundamental group	13
VIII.0 :	Default hypotheses	14
VIII.1 :	Definitions and basic properties	14
	Concatenation of curves	15
	Algebraic identities up to homotopy	16
	Properties of the fundamental group construction	18
VIII.2 :	Important special cases	20
	More examples of nontrivial fundamental groups	24
	Change of basepoints	24
	Free homotopy classes of closed curves	25
VIII.3 :	Covering spaces	27
	The main concepts	27
	The Path Lifting and Covering Homotopy Properties	29
	Examples of covering spaces	29
	Composites of covering space projections	31
VIII.4 :	Fundamental groups of spheres	31
	Spaces with large fundamental groups	33
VIII.5 :	Simply connected spaces	34
	Applications to computing fundamental groups	36
	Fundamental group of the Klein Bottle	37
	Note on spaces with finite fundamental groups	38
	Simply connected regions in \mathbb{R}^2	39
VIII.6 :	Homotopy of paths and line integrals	39
	Path dependence of line integrals	40
	Background from multivariable calculus	42
	Broken line inscriptions	43
	Proof of Theorems 1 and 4	45
	Line integrals of complex analytic functions	49
	Application to the Fundamental Theorem of Algebra	50

IX.	Computing fundamental groups	52
IX.1 :	Free groups	52
	Existence of free groups.....	55
	Quotients of free groups	56
IX.2 :	Sums and pushouts of groups.....	57
	Definition and uniqueness properties	58
	Construction of free products	60
	A curious example.....	62
	Pushout diagrams	62
	Amalgamation along a common subgroup.....	65
IX.3 :	The Seifert-van Kampen Theorem	66
	Proof of surjectivity	67
	Proof of injectivity	68
	Generalization to disconnected intersections	71
IX.4 :	Examples and computations	72
	Regular attachment of a cell	73
	Realizing finitely presented groups	74
	Isomorphisms between finitely presented groups	76
	Fundamental groups of surfaces	76
	Appendix A : Topological equivalence of disks and hypercubes	84
	Appendix B : Topological manifolds	85
	Separation properties	87
	Examples and nonexamples	87
	Homogeneity of connected manifolds	90
	The topological classification problem.....	90
	Metrizability criteria.....	92
	Metrizability and second countability	92
	Appendix C : Fiber spaces and fundamental groups	95
