

# Mathematics 205A: Topology – I Part One

## Course Notes, Fall 2014

### Detailed Table of Contents

Introduction . . . . .	iii
The choice of topics to be covered . . . . .	iii
Some alternate and additional references . . . . .	iv
References to Sutherland for these notes . . . . .	iv
Secondary course goals . . . . .	v
Remarks on priorities . . . . .	vi
<b>I. Foundational material . . . . .</b>	<b>1</b>
Coverage of topics in this unit . . . . .	2
I.1 : Basic set theory . . . . .	2
The Axiom of Choice . . . . .	2
I.2 : Products, relations and functions . . . . .	3
Definitions of relations and functions . . . . .	3
Comments on terminology . . . . .	3
Images and inverse images of subsets . . . . .	4
Disjoint unions . . . . .	4
I.3 : Cardinal numbers . . . . .	4
Partial ordering of cardinalities . . . . .	5
Cardinal arithmetic . . . . .	6
I.4 : The real number system . . . . .	9
<b>II Metric and topological spaces . . . . .</b>	<b>10</b>
II.1 : Metrics and topologies . . . . .	11
The basic definitions and a few examples . . . . .	11
Open sets . . . . .	12
Topological spaces . . . . .	13
Comparing and constructing topologies on a set . . . . .	15
Basic open subsets for a topology . . . . .	16
Subspace topologies . . . . .	17
Neighborhoods . . . . .	17
II.2 : Closed sets and limit points . . . . .	18
Limit points and limits of sequences . . . . .	18
Closures and interiors of subsets . . . . .	20
Convergence in general topological spaces . . . . .	21
II.3 : Continuous functions . . . . .	22
Homeomorphisms and other special mappings . . . . .	25
Different metrics determining the same topology . . . . .	27
Metric spaces of functions . . . . .	27
Piecing together continuous functions . . . . .	28

II.4 :	Cartesian products.....	29
	Topological structures on finite products.....	29
	General properties of (finite) product topologies.....	31
	Products and morphisms.....	33
	Products and metric spaces.....	34
	Products and the Hausdorff Separation Property.....	36
	Infinite products.....	37
III	<b>Spaces with special properties</b> .....	40
III.1 :	Compact spaces – I.....	40
	The Finite Intersection Property.....	42
	Compactness and continuous mappings.....	43
	Products and compactness.....	43
	Compactness and infinite products.....	45
	Compact metric spaces.....	45
III.2 :	Complete metric spaces.....	47
	Properties of complete metric spaces.....	48
	Function spaces.....	49
	Intersections of nested closed sets.....	50
	Completions of metric spaces.....	51
III.3 :	Implications of completeness.....	53
	Nowhere dense and meager subspaces.....	53
	Baire spaces.....	55
	The Contraction Lemma.....	56
III.4 :	Connected spaces.....	58
	Connectedness and the real line.....	59
	Finding connected (sub)sets.....	62
	Products and connectedness.....	64
	Distinguishing homeomorphism types.....	65
III.5 :	Variants of connectedness.....	66
	Locally connected spaces.....	66
	Path or arcwise connectedness.....	67
	Analogies with connectedness.....	68
	Strong arcwise connectedness.....	69
	Open subsets of Euclidean spaces.....	69
	Space-filling curves and related issues.....	70
IV	<b>Function spaces</b> .....	71
IV.1 :	General properties.....	71
	Formal properties of function spaces.....	71
	The compact-open topology.....	75
	Compactness in function spaces.....	75
IV.2 :	The adjoint property.....	77

V	<b>Constructions on spaces</b> .....	79
V.I :	Quotient spaces .....	79
	Quotients and morphisms .....	80
	Recognizing quotient maps .....	81
	Important examples .....	82
V.2 :	Sums and cutting and pasting .....	84
	Disjoint union topologies .....	84
	Copy, cut and paste constructions .....	87
	Disjoint unions of families of sets .....	89
VI	<b>Spaces with additional properties</b> .....	91
VI.1 :	Second countable spaces .....	91
	Implications of second countability .....	92
	The reverse implications for metric spaces .....	93
	Examples involving nonmetrizable spaces .....	93
VI.2 :	Compact spaces – <b>II</b> .....	96
	Sequential compactness for metric spaces .....	96
	Wallace’s Theorem .....	97
VI.3 :	Separation axioms .....	98
	The $\mathbf{T}_i$ conditions .....	98
	Compactness and separation axioms .....	100
	References for examples .....	100
	Non-Hausdorff topologies .....	102
	Counting topologies on finite sets .....	103
VI.4 :	Local compactness and compactifications .....	104
	Compactifications of noncompact spaces .....	105
	Examples of compactifications .....	107
	The Alexandroff one point compactification .....	109
	One point compactifications of Euclidean spaces .....	110
	Locally connected compactifications .....	110
VI.5 :	Metrization theorems .....	112
	Constructions for continuous functions .....	112
	Piecewise metrizable spaces .....	114
	An alternate approach .....	116
	General metrization theorems .....	117

<b>Appendix A : Topological groups</b> .....	119
Properties of topological groups.....	121
Analysis on topological groups.....	125
Remarks on Lie groups.....	126
Local topological groups.....	128
<b>Appendix B : Stereographic projection and inverse geometry</b> .....	129
Relating stereographic projections and inversions.....	130
The conformal property for inversions.....	131
<b>Appendix C : Homogeneity of open sets in Euclidean spaces</b> .....	133
A local construction.....	133
Local homogeneity.....	134
A global homogeneity theorem.....	135
Some related examples.....	135
<b>Appendix D : Normal forms for orthogonal transformations</b> .....	137
Small dimensional orthogonal transformations.....	137
Complexification.....	138
Derivation of normal form.....	139
<b>References</b> .....	140
Further references.....	140
<b>Summary of Files in the Course Directory</b> .....	144
