

Mathematics 205A: Topology — I

Course Notes, Fall 2008

Detailed Table of Contents

I	Foundational material	1
	Coverage of topics in this unit	2
I.1 :	Basic set theory	2
	The Axiom of Choice	2
I.2 :	Products, relations and functions	3
	Definitions of relations and functions	3
	Comments on terminology	3
	Images and inverse images of subsets	4
	Disjoint unions	4
I.3 :	Cardinal numbers	5
	Partial ordering of cardinalities	5
	Cardinal arithmetic	6
I.4 :	The real number system	9
II	Metric and topological spaces	10
II.1 :	Metrics and topologies	11
	The basic definitions and a few examples	11
	Open sets	12
	Topological spaces	13
	Comparing and constructing topologies on a set	15
	Basic open subsets for a topology	15
	Subspace topologies	16
	Neighborhoods	17
II.2 :	Closed sets and limit points	18
	Limit points and limits of sequences	18
	Closures and interiors of subsets	20
	Convergence in general topological spaces	21
II.3 :	Continuous functions	22
	Homeomorphisms and other special mappings	24
	Different metrics determining the same topology	26
	Metric spaces of functions	27
	Piecing together continuous functions	27
II.4 :	Cartesian products	29
	Topological structures on finite products	29
	General properties of (finite) product topologies	31
	Products and morphisms	33
	Products and metric spaces	34
	Products and the Hausdorff Separation Property	35
	Infinite products	36

III	Spaces with special properties	39
III.1 :	Compact spaces – I	39
	The Finite Intersection Property	41
	Compactness and continuous mappings	42
	Products and compactness	42
	Compactness and infinite products	44
	Compact metric spaces	44
III.2 :	Complete metric spaces	47
	Properties of complete metric spaces	47
	Function spaces	49
	Intersections of nested closed sets	50
	Completions of metric spaces	50
III.3 :	Implications of completeness	54
	Nowhere dense and meager subspaces	54
	Baire spaces	55
	The Contraction Lemma	55
III.4 :	Connected spaces	59
	Connectedness and the real line	59
	Finding connected (sub)sets	61
	Products and connectedness	63
	Distinguishing homeomorphism types	64
III.5 :	Variants of connectedness	65
	Locally connected spaces	65
	Path or arcwise connectedness	66
	Analogies with connectedness	66
	Open subsets of Euclidean spaces	67
IV	Function spaces	69
IV.1 :	General properties	69
	Formal properties of function spaces	69
	The compact-open topology	73
	Compactness in function spaces	73
IV.2 :	The adjoint property	75
V	Constructions on spaces	77
V.I :	Quotient spaces	77
	Quotients and morphisms	78
	Recognizing quotient maps	79
	Important examples	80
V.2 :	Sums and cutting and pasting	82
	Disjoint union topologies	82
	Copy, cut and paste constructions	85
	Disjoint unions of families of sets	87

VI	Spaces with additional properties	89
VI.1 :	Second countable spaces.....	89
	Implications of second countability.....	90
	The reverse implications for metric spaces.....	91
	Examples involving nonmetrizable spaces.....	91
VI.2 :	Compact spaces – II	94
	Sequential compactness for metric spaces.....	94
	Wallace’s Theorem.....	95
VI.3 :	Separation axioms	96
	The \mathbf{T}_i conditions.....	96
	Compactness and separation axioms.....	98
	References for examples.....	98
	Non-Hausdorff topologies.....	99
VI.4 :	Local compactness and compactifications	101
	Compactifications of noncompact spaces.....	102
	Examples of compactifications.....	104
	The Alexandroff one point compactification.....	105
	One point compactifications of Euclidean spaces.....	106
	Locally connected compactifications.....	107
VI.5 :	Metrization theorems	109
	Constructions for continuous functions.....	109
	Piecewise metrizable spaces.....	111
	An alternate approach.....	113
	General metrization theorems.....	114

Appendix A : Topological groups	116
Properties of topological groups.....	118
Analysis on topological groups.....	122
Remarks on Lie groups.....	123
Appendix B : Stereographic projection and inverse geometry	126
Relating stereographic projections and inversions.....	127
The conformal property for inversions.....	128
Appendix C : Homogeneity of open sets in Euclidean spaces	130
A local construction.....	130
Local homogeneity.....	131
A global homogeneity theorem.....	132
Some related examples.....	132
Appendix D : Normal forms for orthogonal transformations	134
Small dimensional orthogonal transformations.....	134
Complexification.....	135
Derivation of normal form.....	136
References	137
Further references.....	137
